

Infolog TMS Transportation Management System

SOLUTION

Supply Chain and Transport

If you are a shipper, retailer or logistics provider, the Infolog TMS has been designed to help you reducing your transport costs, at the same time improving fill rates and optimising the carrier allocation. This comprehensive solution guarantees speed and reliability for your customers, while keeping a minimum stock level and entirely controlling the flow management.

The Solution

Transport, which is a mainstay of customer relations, generally tends to be the centre of poorly controlled costs in current logistics organisations. The Infolog TMS software package meets all common transport issues:

- Grouping of orders into homogeneous batches
- Matching the transport offer with shippers' expectations
- Adjusting capacities to workloads
- Tracing dispatches
- Optimising transport costs by improving fill rates and through better allocation of carriers
- Decreasing administrative fees (follow-up, invoicing, disputes, etc.) and getting a better transport budget control (follow-up and detailed budget analysis)
- Steering transport thanks to the Supply Chain Event Management module. TMS manage events, alerts and incidents in WorkFlow mode
- Being responsive to transport incidents
- Measuring the greenhouse gas emissions...

Advantages

An operational concept

Designed by a specialist team in collaboration with its future users, Infolog TMS can be customised and enhanced.

This software package is at the heart of the logistics system, between the different information systems of all the supply chain actors.

Infolog TMS Transportation Management System

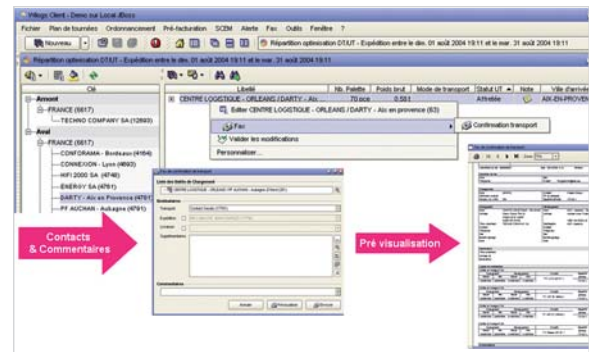

An all-encompassing tool

- Powerful setting options enabling proactive management of events.
- A comprehensive reference frame integrating customer data: products, packaging, logistics premises, carriers, routes and rates.
- An optimisation module that controls and groups all transport requests, manages routes, optimises loads and allocates referenced carriers.
- Advanced ergonomics with a viewing screen and transport planner.
- A tool to calculate estimates and to pre-invoice, with simple-to-manage price grids.
- Management of financial flows to estimate and control logistics costs and margins for the entire supply chain.
- A solution that complies with regulations and international logistics organisations.
- A Track and Trace module to keep track of and to share all incidents and milestones throughout transport.

Immediate efficiency

Infolog TMS provides immediate improvement at all levels:

- Administrative: implementation of EDI procedures, reduced invoicing time, efficient follow-up of disputes.
- Operational follow-up: carrier rating, actual delivery times, causes of customer disputes.
- Customer service: track and trace.
- Financial: Controlled transport costs.
- Quick return on investment: ongoing and personalised follow-up enabling functionalities to be constantly improved.
